About ngena

[ngena](#) provides enterprises with consistent data connectivity services, integrating the networks of its alliance partners into a single global Software-Defined Network (SDN). Using state-of-the-art cloud and virtualization technologies of Cisco, ngena offers end-to-end managed Software-Defined Wide Area Networks as a Service. The combination of this technology with the alliance's operating model gives customers access to secure, stable, scalable and easy-to-use global corporate networks, and provides high-quality local customer care. ngena is founded on the strong technologies of Cisco, Comarch, Equinix and Zscaler. ngena's Go-To-Market Partners include several leading Service Providers & System Integrator partners from across the world. See the full list of ngena's partners here: ngena.net/partners/.
