

Company overview

We built ngena to simplify network transformation and provide secure connectivity.

Discover simplified connectivity at its finest

With ngena, you gain access to our .connect platform, which enables simplicity to run the full life cycle of your network operations with our platform, .connect. Now you can manage your entire network and expand with ease with fully capable monitoring and analytics all from one command center, we call it .connect.

With .connect, it's easy to access and deploy our SD-WAN backed best in class SASE solutions. We have you covered with full-service multi-tech network solutions that are beyond basic, including:

SD-WAN
SASE
EDGE
CLOUD
ACCESS
Wi-Fi

Experience speed to market

Networks must adapt to new ways of working with scalability and evolve their business models to keep up with the wide breadth of needs of today's enterprise network. Network creation, deployment, operations, and security maintenance takes time and resources. ngena's .connect platform and QuickSizer tool helps you save on all aspects of the full life cycle of network optimization, with best in class assistance all along the way.

Meeting market demands — each customer has a unique digital journey to the cloud

Enterprises today face a range of challenges such as digitalization, remote working, globalization and new IT solutions call for flexible-managed services and ready-to-use cloud network solutions.

ngena meets these challenges head on by providing state-of-the-art multi-cloud and virtualization SD-WAN technologies that enable a company's digital transformation with speed, agility, and the latest innovative application services. Pre-designed configurations are ready to be deployed or further customized to fit any client's unique connection to the cloud.

Our end-to-end full life cycle platform makes it simple to expand and manage your network from anywhere, at anytime.

Meet .connect

The all-in-one single operational platform to simply design, connect, expand, and maintain your networks.

ngena provides a completely new way to generate, operate ,and maintain multi-tech secure connectivity for your business. With .connect, users work wherever they want, on any type of device to securely create, operate, select, enhance, and deploy from one point of control.

01. Select

It's simple to create and quote access designs

With the QuickSizer tool easily accessible from our .connect platform, you can easily select your access points, get a visual of your network design, and receive a quote in 2 minutes or less. In this way ngena offers ultimate flexibility to give your enterprise the benefit of designing your network around the corner or across the globe, you can even bring your own access, existing licenses, and your own devices and manage everything from .connect.

02. Enhance

Simplify Network Enhancements

Work within a guided support mode to validate your initial quote. Simplify designing your network in just a few steps. By leveraging pre-configured access design features we make it even easier to add-on capabilities. Confirm “bring your own” compatibility with your other technology before you begin and verify your security points with ease. Modify and update your network design for maximum flexibility, adaptability, and scalability.

03. Deploy

Zero touch deployment ensures security

All fulfillment and logistics are supported by ngena. With .connect, you get real-time visibility through every phase of deployments worldwide with the additional benefit of access to visual guides that clearly show the status of network health and includes insightful traffic analytics. CPEs are automatically configured when turned on. Quick, new site integration with your existing SD-WAN infrastructure occurs within minutes, not hours or days.

04. Operate

Simplify network operations

Proactively monitor your network anywhere, anytime, from wherever you are. Ensure networks are running effectively. Stay ahead of potential outages with AI-integrated monitoring and alerts and easily track global SLA requirements. The health of the network is auto-monitored to quickly identify and correct any issues and resolutions are offered for quick course correction.

About ngena

ngena is a global company that connects teams and unites the workforce worldwide through a centralized simplified secure network connectivity experience. With one touch, ngena simplifies and strengthens global cloud computing, business networking, data analytics and data security at workplaces within the enterprise and at home.

Mission statement

Bringing simplified secure connectivity to your enterprise networks.
simply, reliably, and affordably.
